Odyssey FR is an acrylic coated, 100% woven flame retardant polyester fabric (300 denier) with a pad and topcoat. Odyssey FR meets many flame retardant specifications, both initial and leaching. That means that unlike other fabrics, you don't have to worry about still meeting a flame specification after it has been exposed to the elements. As part of the Odyssey family of economical coated fabrics, it is characterized by excellent strength, durability, tear and abrasion resistance, dimensional stability, UV and mildew resistance at an economical price point. Odyssey FR provides flame retardancy without the high cost and weight of heavier fabrics. Odyssey FR is perfect for awnings, air ducts, signs, banners, luggage, bags, tents, gazebos, canopies, or any application requiring flame resistance.

Odyssey FR, economical and flame retardant. Now that's hot.

Odyssey Open is an acrylic coated, 100% woven flame retardant polyester fabric (300 denier) with a pad coat. Its unique coating allows the fabric to be open, providing air and water permeability. Odyssey Open meets MVSS-302 to provide some flame retardancy. As part of the Odyssey family of economical coated fabrics, it is characterized by excellent strength, durability, tear and abrasion resistance, dimensional stability, UV and mildew resistance at an economical price point. Because of its unique construction, Odyssey Open is not for every application, but it is perfect for cots, air ducts, signs, banners, outdoor furniture or any other application requiring openness and flame resistance.

Odyssey Open, seeing through to the right fabric.
